

Yavapai Amateur Radio Club

Initial Elmer Survey

ask.elmer@w7yrc.org

The whole idea of setting up an antenna or station can be overwhelming and physically challenging. The Elmer Group is here to help. An Elmer is an Amateur Radio term used to describe a person or person(s) that mentor new hams. We ask that you answer some questions so that we can better understand your needs.

During installation activities, the Elmers typically use supplies such as tape, wire ties, and other miscellaneous expendable items that are provided from their own personal supplies and typically reimbursed by the club. To help defer these costs, we ask you to consider an optional donation. If you feel so inclined, please make your donation to the Yavapai Amateur Radio Club.

Download this form to your computer. You can fill in the information, save the form and email it to the indicated email address. After they receive your form, the Elmers will contact you.
